European Research in Mathematics Education IV

Proceedings of the Fourth Congress of the
European Society for Research in Mathematics Education
Sant Feliu de Guíxols, Spain – 17 - 21 February 2005

Chief editor
Marianna Bosch
FUNDEMI IQS – Universitat Ramon Llull

Editorial board

Editing assistance
Marta Perpiñán, M. Àngels Portabella
# TABLE OF CONTENTS

## INTRODUCTION

*Barbara Jaworski, Marianna Bosch*

## PLENARIES

**Opening plenary**
Steps towards a new epistemology in mathematics education
*Yves Chevallard*

**Closing plenary**
The role of mathematics education research in influencing educational policy
*Margaret Brown*

**Panel: History and theory of mathematics education**
An introduction to the topic of the panel. Remembering Hans-Georg Steiner: the theory of mathematics education program
*Juan D. Godino*

History and theory of mathematics education
*Michèle Artigue*

History and theory of mathematics education
*Paul Ernest*

Not out of the blue: historical roots of mathematics education in Italy
*Fulvia Furinghetti*

## WORKING GROUP 1. The role of metaphors and images in the learning and understanding of mathematics

The role of metaphors and images in the learning and understanding of mathematics
*Bernard Parzysz, Angela Pesci, Christer Bergsten*

Students interacting with an artefact designed to visualise three-dimensional analytic geometry
*Christer Bergsten, Torbjörn Fransson*

Metaphors in mathematics classrooms: analyzing the dynamic process of teaching and learning of graph functions
*Janete Bolite Frant, Jorge I. Acevedo, Vicenç Font*

Metaphors and gestures in fraction talk
*Laurie D. Edwards*

A review of some recent studies on the role of representations in mathematics education in Cyprus and Greece
*Athanasios Gagatsis, Iliada Elia*

Metaphorical objects and actions in the learning of geometry. The case of French pre-service primary teachers
*Françoise Jore, Bernard Parzysz*
Mediation of metaphorical discourse in the reflection on one’s own individual relationship with the taught discipline: an experience with mathematics teachers

Angela Pesci

Building visual structures in arithmetical knowledge – A theoretical characterization of young students’ “visual structurizing ability (ViSA)”

Elke Söbbeke

The effect of mental models (“Grundvorstellungen”) for the development of mathematical competencies. First results of the longitudinal study PALMA

Rudolf vom Hofe, Michael Kleine, Werner Blum, Reinhard Pekrun

A dyslexic child’s strategies and images in arithmetic: a longitudinal study

Xenia Xistouri, Demetra Pitta-Pantazi

WORKING GROUP 2. Affect and mathematical thinking

Affect and mathematical thinking. Role of beliefs, emotions and other affective factors

Markku S. Hannula, Inés M. Gómez-Chacón, George Philippou, Wolfgang Schlöglmann

Self-conceptualised perceptions of attitude and ability among student teachers

Patricia T. Eaton, Sonia Kidd

Reflections on creativity: the case of a good problem solver

Fulvia Furinghetti, Francesca Morselli

Affect, mathematical thinking and intercultural learning. A study on educational practice

Inés M. Gómez-Chacón

The structure of student teachers’ view of mathematics at the beginning of their studies

Markku S. Hannula, Raimo Kaasila, Anu Laine, Erkki Pehkonen

Autobiographical narratives, identity and view of mathematics

Raimo Kaasila, Markku S. Hannula, Anu Laine, Erkki Pehkonen

Sustained engagement: preservice teachers' experience with a chain of discovery

Peter Liljedahl

Trying to change attitude towards maths: a one-year experimentation

Pietro Di Martino, Maria Mellone

Mathematical discomfort and school drop-out in Italy

Manuela Moscucci, Maria Piccione, Maria Gabriella Rinaldi, Serena Simoni, Carlo Marchini

The measurement of young pupils’ metacognitive ability in mathematics: the case of self-representation and self-evaluation

Areti Panaoura, George Philippou

Teachers’ use of the construct ‘attitude’: preliminary research findings

Maria Polo, Rosetta Zan

Meta-affect and strategies in mathematics learning

Wolfgang Schlöglmann

WORKING GROUP 3. Building structures in mathematical knowledge

Building structures in mathematical knowledge

Milan Hejný, Graham Littler, Ladislav Kvasz, Dvora Peretz
Table of contents

Building structure in mathematics within teaching and learning processes - a study on teachers’ input and students’ achievement 290
   Astrid Brinkmann

The metaphor “contracts to deal with concepts” as a structuring tool in algebra 300
   Elmar Cohors-Fresenborg, Christa Kaune

From experience, through generic models to abstract knowledge 311
   Milan Hejný, Jana Kratochvílová

Classification leading to structure 321
   Darina Jirotková, Graham H. Littler

Discussing the challenge of categorising mathematical knowledge in mathematics research situations 332
   Eva Knoll, Cécile Ouvrier-Buffet

On linguistic aspects of structure building 342
   Ladislav Kvasz

Approaching the distributive law with young pupils 352
   Nicolina A. Malara, Giancarlo Navarra

The development of informal proportional thinking in primary school 363
   Marilena Pantziara, Demetra Pitta-Pantazi

14 years old pupils’ thought processes: a case study of constructing the triangular inequality 374
   Elif B. Turnuklu, Sibel Yesilder

WORKING GROUP 4. Argumentation and proof

Argumentation and proof 385
   Maria Alessandra Mariotti, Christine Knipping, Dietmar Küchemann, Kirsti Nordström

Argumentation and proof in examples taken from French and German textbooks 391
   Richard Cabassut

A proposal of categorisation for analysing inductive reasoning 401
   Mª Consuelo Cañadas Santiago, Encarnación Castro Martínez

Natural deduction in predicate calculus: a tool for analysing proof in a didactic perspective 409
   Viviane Durand-Guerrier

Visualising and conjecturing solutions for Heron's problem 420
   Lourdes Figueiras, Jordi Deulofeu

A genetic approach to proof 428
   Hans Niels Jahnke

Pupils’ awareness of structure on two number/algebra questions 438
   Dietmar Küchemann, Celia Hoyles

Proof in Swedish upper secondary school mathematics textbooks - the issue of transparency 448
   Kirsti Nordström, Clas Löfwall

The meaning of proof in mathematics education 458
   David A. Reid

About a constructivist approach for stimulating students’ thinking to produce conjectures and their proving in active learning of geometry 469
   Oleksiy Yevdokimov
## WORKING GROUP 5. Stochastic Thinking

**Working Group 5 on “Stochastic Thinking”**

*Dave Pratt*

### Invited paper

Probabilistic and statistical thinking

*Manfred Borovcnik*

### Papers on Statistics Education

- A structural study of future teachers’ attitudes towards statistics
  *Carmen Batanero, Assumpta Estrada, Carmen Díaz, José M. Fortuny*
- Teachers’ representations of independent events: what might an attempt to make sense hide?
  *Marie Nabbout, Sylvette Maury*
- The nature of the quantities in conditional probability problems. Its influence on problem solving behaviour
  *M. Pedro Huerta, Mª Ángeles Lonjedo*
- Exploring introductory statistics: students’ understanding of variation in histograms
  *Carl Lee, Maria Meletiou-Mavrotheris*
- Improving stochastic content knowledge of preservice primary teachers
  *Robert Peard*
- Randomness in textbooks: the influence of deterministic thinking
  *Pilar Azcárate, José Mª Cardeñoso, Ana Serradó*

### Papers on Probabilistic Thinking

- Problab goes to school: design, teaching, and learning of probability with multi-agent interactive computer models
  *Dor Abrahamson, Uri Wilensky*
- Strengths and weaknesses in students’ project work in exploratory data analysis
  *Rolf Biehler*
- Randomness and lego robots
  *Michele Cerulli, Augusto Chiocchiarollo, Enrica Lemut*
- Students' meaning-making processes of random phenomena in an ICT-environment
  *Kjærand Iversen, Per Nilsson*
- Young children’s expressions for the law of large numbers
  *Efi Paparistodemou*
- Towards the design of tools for the organization of the stochastic
  *Dave Pratt, Theodosia Prodromou*

## WORKING GROUP 6. Algebraic Thinking

**Working Group 6. Algebraic Thinking**

*Jean-Philippe Drouhard, Mabel Panizza, Luis Puig, Luis Radford*

### Difficulties found by the students during the study of substraction of integer numbers

*Andrea María Araya Chacón*

### Inequalities and equations: history and didactics

*Giorgio T. Bagni*

### Pupil’s autonomous studying: from an epistemological analysis towards the construction of a diagnosis

*Pierre Duchet, Erdoğan Abdulkadir*

</tbody>
</table>

*CERME 4 (2005)*
Voices in scaffolding mathematical constructions  
Mehmet Fatih Ozmantar, John Monaghan  
Uncertainty and different styles of friendly conversation  
Anna-Maija Partanen  
Geometric Representatives in Pupils’ Communication  
Filip Roubíček  
Semiotic processes in a mathematical internet-chat  
Christof Schreiber  
Interaction structures in primary school mathematics with a multilingual student body  
Marcus Schütte

WORKING GROUP 9. Tools and technologies in mathematical didactics

Tools and technologies in mathematical didactics  
Bärbel Barzel, Paul Drijvers, Michela Maschietto, Luc Trouche  
Mathematics and e-learning: a conceptual framework  
Giovannina Albano  
Supportive use of Derive  
Mette Andresen  
From distributed to shared knowledge – a conceptual framework for a virtual seminar in teacher education  
Christine Bescherer, Matthias Ludwig, Barbara Schmidt-Thieme, Hans-Georg Weigand  
Chaining operations to get insight in expressions and functions  
Peter Boon, Paul Drijvers  
Technology-assisted discovery of conceptual connections within the cognitive neighbourhood of a mathematical topic  
Thierry Dana-Picard  
Tool use in trigonometry in two countries  
Ali Delice, John Monaghan  
Students’ choice of tasks and tools in an ICT rich environment  
Anne Berit Fuglestad  
The balance. An interactive activity to work with fractions  
María Trigueros G., Heréndira García Tello  
Distance training, a key mode to support teachers in the integration of ICT? Towards collaborative conception of living pedagogical resources  
Dominique Guin, Luc Trouche  
Dynamic representations: a new perspective on instrumental genesis  
Stephen J. Hegedus  
Sustaining interaction in a mathematical community of practice  
João Filipe de Lacerda Matos, Yishay Mor, Madalena Santos, Richard Noss  
Motivation: the contribution of interactive whiteboards to teaching and learning in mathematics  
Douglas Averis, Derek Glover, Dave Miller  
Developing new representations and mathematical models in a computational learning environment  
Nicholas Mousoulides, George Philippou  
Integrating technology in a mathematics cognitive intervention program  
Constantinos Christou, Nicholas Mousoulides, Marios Pittalis
Table of contents

Mathematics laboratory activities with Derive: examples of approaches to algebra 1082
  Maria Reggiani

Putting the learning back into e-learning 1092
  Chris Roe, Dave Pratt, Ian Jones

Physical and virtual worlds in teaching mathematics: possibilities for an effective cooperation? 1102
  Emanuela Ughi, Judit Jassó

Calculating with “rule and compasses”. An example in using technology for mathematics teaching 1113
  Luciana Zuccheri

WORKING GROUP 10. Mathematics education in multicultural settings

Issues and challenges in researching mathematics education in multicultural settings 1125
  Guida de Abreu, Margarida César, Núria Gorgorió, Paola Valero

Cultural identities in the multiethnic mathematical classroom 1131
  Guida de Abreu

Culture, diversity and conflict in landscapes of mathematics learning 1141
  Helle Alrø, Ole Skovsmose, Paola Valero

Diversity seen through teachers’ eyes: discourses about multicultural classes 1153
  Margarida César, Franco Favilli

How parents view mathematics and the learning of mathematics. An intercultural comparative study 1165
  Britta Hawighorst

Norms, social representations and discourse 1176
  Núria Gorgorió, Núria Planas

Engaging with parents on a critical dialogue about mathematics education 1182
  Jill Bratton, Marta Civil, Beatriz Quintos

Research as an act of learning: exploring student backgrounds through dialogue with research participants 1193
  Diana Stentoft

Handicrafts performing life 1204
  Margarida César, Lucília Teles

Language sensitive mathematics teaching in a multicultural classroom. How students’ talking and writing can enlighten hidden problems 1215
  Dolly van Eerde, Maaike Hajer

Developing a community in the classroom: implications for mathematics education 1226
  Marta Civil, Peter Wiles

WORKING GROUP 11. Different theoretical perspectives and approaches in research in mathematics education

Different theoretical perspectives and approaches in research in mathematics education 1239
  Michèle Artigue, Mariolina Bartolini Bussi, Tommy Dreyfus, Eddie Gray, Susanne Prediger

Theoretical issues in research of mathematics education: some considerations 1244
  Maria Kaldrimidou, Marianna Tzekaki

Science or magic? The use of models and theories in didactics of mathematics 1254
  Marianna Bosch, Yves Chevallard, Josep Gascón
### Table of contents

- Relating theories to practice in the teaching of mathematics  
  *Anna Poynter, David Tall*  
  Page 1264
- Conceptualisation through semiotic tools in teaching/learning situations  
  *Isabelle Bloch*  
  Page 1274
- Crossing the border integrating different paradigms and perspectives  
  *Angelica Bikner-Ahsbahs*  
  Page 1285
- Conceptualization of the limit by means of the discrete continuous interplay: different theoretical approaches  
  *Ivy Kidron*  
  Page 1295
- Theories and empirical researches: towards a common framework  
  *Ferdinando Arzarello, Federica Olivero*  
  Page 1305
- Comparison of different theoretical frameworks in didactic analyses of videotaped classroom observations  
  *Michèle Artigue, Agnès Lenfant, Eric Roditi*  
  Page 1316
- Intuitive vs. analytical thinking: four theoretical frameworks  
  *Uri Leron*  
  Page 1327
- Didactic effectiveness of equivalent definitions of a mathematical notion. The case of the absolute value  
  *Juan D. Godino, Eduardo Lacasta, Miguel R. Wilhelmi*  
  Page 1338
- Working in a developmental research paradigm: the role of didactician/researcher working with teachers to promote inquiry practices in developing mathematics learning and teaching  
  *Maria Luiza Cestari, Espen Daland, Stig Eriksen, Barbara Jaworski*  
  Page 1348
- Different perspectives on computer-based graphs and their meaning  
  *Francesca Ferrara, Ornella Robutti, Cristina Sabena*  
  Page 1359
- The act of remembering and mathematical learning  
  *Teresa Assude, Yves Paquelier, Catherine Sackur*  
  Page 1370
- The didactical transposition of didactical ideas: the case of the virtual monologue  
  *Lisser Rye Ejersbo, Uri Leron*  
  Page 1379
- An integrate perspective to approach technology in mathematics education  
  *Michele Cerulli, Bettina Pedemonte, Elisabetta Robotti*  
  Page 1389

### WORKING GROUP 12. From a study of teaching practices to issues in teacher education

- From a study of teaching practices to issues in teacher education  
  *José Carrillo, Ruhama Even, Tim Rowland, Lurdes Serrazina*  
  Page 1403
- What teachers know: the knowledge bases of classroom practice  
  *Janet Ainley, Michael Luntley*  
  Page 1410
- Secondary school teachers’ conceptions about algebra teaching  
  *Iiris Attorps*  
  Page 1420
- The learning portfolio as an assessment strategy in teacher education  
  *Pilar Azcárate, José Mª Cardeñoso, Anna Serradó*  
  Page 1430
- Values in mathematics teaching: how mathematical?  
  *Chris Husbands*  
  Page 1440
- From practices to theories to practices … in learning to teach mathematics and learning mathematics  
  *Laurinda Brown*  
  Page 1451
- Teacher’s activity and knowledge: the teaching of setting up equations  
  *Lalina Coulange*  
  Page 1462
Learning within communities of practice in preservice secondary school teachers education  
*Pedro Gómez, Luis Rico*  
1473

Developing mathematics teacher’s competence  
*Alena Hospesová, Marie Tichá*  
1483

Teachers’ implementation of a curriculum reform  
*Bodil Kleve*  
1494

Teachers using technology: models of the complexity of practices  
*Jean-Baptiste Lagrange, Nuray Dedeoglu, Emel Erdogan*  
1505

The frameworks of school experience: an anthropo-didactic approach to the phenomena of mathematics teaching  
*Alain Marchive*  
1515

The transition from initial training to immersion in practice. The case of a mathematics primary teacher  
*José Carrillo, Nuria Climent, M. Cinta Muñoz*  
1526

Pupils’ error treatment by high school teachers, relating to the notion of inverse function  
*Susana Murillo*  
1537

Exploring the role of virtual interactions in pre-service mathematics teacher education  
*João Pedro da Ponte, Helena Fonseca, Paulo Oliveira, Hélia Oliveira, José Manuel Varandas*  
1547

The student teacher and learning objectives: within a sociocultural activity system  
*Anne Edwards, Pat Perks, Stephanie Prestage*  
1558

The knowledge quartet: considering Chloe  
*Peter Huckstep, Tim Rowland, Anne Thwaites*  
1568

The portfolio in teacher education  
*Leonor Santos*  
1579

The teacher’s action, the researcher’s conception in mathematics  
*Gérard Sensevy, Florence Ligozat, Francia Leutenegger, Alain Mercier*  
1588

The role of the practice of theorising practice  
*Jeppe Skott*  
1598

Views on early school mathematics – European needs and the local reality  
*Ewa Swoboda*  
1609

**WORKING GROUP 13. Applications and modelling**

Introduction to the Working Group “Applications and Modelling”  
*Gabriele Kaiser*  
1613

“Filling up” – the problem of independence-preserving teacher interventions in lessons with demanding modelling tasks  
*Werner Blum, Dominik Leiß*  
1623

An introduction to mathematical modelling: an experiment with students in economics  
*Jean-Luc Dorier*  
1634

Mathematical praxeologies of increasing complexity: variation systems modelling in secondary education  
*Fco. Javier García García, Luisa Ruiz Higueras*  
1645

Getting to grips with real world contexts: developing research in mathematical modelling  
*Christopher Haines, Rosalind Crouch*  
1655

Levels of modelling competence  
*Herbert Henning, Mike Keune*  
1666
